# Chapter 1

## AMASPJavaLib

Amasp library for java.

This library implements the AMASP (ASCII Master/Slave Protocol) for JAVa, a simple way to exchange messages between two computers using serial communication.

AMASP is free and uses four different packets:

MASTER -> SLAVE:

MRP - Master Request Packet CEP - Communication Error Packet

SLAVE -> MASTER:

SRP - Slave Response Packet SIP - Slave Interruption Packet CEP - Communication Error Packet

The protocol is transparent to the user that only needs to use the AMASP Java Library functions to implement his own applications.

AMASPJavaLib is under test and improvements, if you have any problem using it, please send a mail to the author (Spanish, Portuguese or English) [adelai@gmail.com](mailto:adelai@gmail.com).

Contributors will be welcome!

Wants to design an AMASP library to other platforms? Be my guest!

Documentation about AMASP available here: <https://doi.org/10.14209/jcis.2019.1>

Author:

Andre L. Delai [adelai@gmail.com](mailto:adelai@gmail.com)

Enjoy, it's free! :)

## Chapter 2

# Hierarchical Index

### 2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

AMASPJava.AMASPSerial . . . . .	7
AMASPJava.AMASPSerialMaster . . . . .	10
AMASPJava.AMASPSerialSlave . . . . .	11
AMASPJava.AMASPSerial.ErrorCheckType . . . . .	13
AMASPJava.AMASPSerial.PacketData . . . . .	14
AMASPJava.AMASPSerial.PacketType . . . . .	15

## Chapter 3

# Class Index

### 3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">AMASPJava.AMASPSerial</a> . . . . .	7
<a href="#">AMASPJava.AMASPSerialMaster</a> . . . . .	10
<a href="#">AMASPJava.AMASPSerialSlave</a> . . . . .	11
<a href="#">AMASPJava.AMASPSerial.ErrorCheckType</a> . . . . .	13
<a href="#">AMASPJava.AMASPSerial.PacketData</a> . . . . .	14
<a href="#">AMASPJava.AMASPSerial.PacketType</a> . . . . .	15

## Chapter 4

# Class Documentation

### 4.1 AMASPJava.AMASPSerial Class Reference

Inheritance diagram for AMASPJava.AMASPSerial:

#### Classes

- enum `ErrorCheckType`
- class `PacketData`
- enum `PacketType`

#### Public Member Functions

- void `setErrorCheckType` (`ErrorCheckType` errorCheckType)
- `ErrorCheckType` `getErrorCheckType` ()
- boolean `begin` (SerialPort serialCom)
- void `end` ()
- void `sendError` (int deviceId, int errorCode)
- `PacketData` `readPacket` ()

#### Public Attributes

- final int `MSGMAXSIZE` = 4096

## Protected Member Functions

- short **CRC16Check** (byte[] data, int dataLength)
- int **LRC16Check** (byte[] data, int dataLength)
- int **XORCheck** (byte[] data, int dataLength)
- int **checksum16Check** (byte[] message, int dataLength)
- int **fletcher16Checksum** (byte[] data, int dataLength)
- int **errorCheck** (byte[] data, int dataLength, [ErrorCheckType](#) eCheckType)

### 4.1.1 Detailed Description

AMASP Abstract class

Author

Andre L. Delai

### 4.1.2 Member Function Documentation

#### 4.1.2.1 begin()

```
boolean AMASPJava.AMASPSerial.begin (
    SerialPort serialCom )
```

Establishes a serial connection.

Parameters

<i>serialCom</i>	A JSerialComm object to serial communication.
------------------	---

Returns

True if the serial connection was stablished or false if not.

#### 4.1.2.2 end()

```
void AMASPJava.AMASPSerial.end ( )
```

Close the serial connection.

#### 4.1.2.3 getErrorCheckType()

```
ErrorCheckType AMASPJava.AMASPSerial.getErrorCheckType ( )
```

Gets the current error checking algorithm to be used in the sent packets.

##### Returns

The current error checking algorithm.

#### 4.1.2.4 readPacket()

```
PacketData AMASPJava.AMASPSerial.readPacket ( )
```

Check if a valid packet is available and read it.

##### Returns

A [PacketData](#) Object which contains the information and data from a packet.

#### 4.1.2.5 sendError()

```
void AMASPJava.AMASPSerial.sendError (
    int deviceID,
    int errorCode )
```

Send a CEP packet (Communication Error Packet).

##### Parameters

<i>deviceID</i>	Id of the target device in communication.
<i>errorCode</i>	The communication error code (0 to 255).

#### 4.1.2.6 setErrorCheckType()

```
void AMASPJava.AMASPSerial.setErrorCheckType (
    ErrorCheckType errorCheckType )
```

Sets the error checking algorithm to be used in the sent packets.

**Parameters**

<i>errorCheckType</i>	The error checking algorithm.
-----------------------	-------------------------------

The documentation for this class was generated from the following file:

- C:/Users/aldelai/Documents/Repositorio/amaspjavallib/AMASPJava/src/AMASPJava/AMASPSerial.java

## 4.2 AMASPJava.AMASPSerialMaster Class Reference

Inheritance diagram for AMASPJava.AMASPSerialMaster:

**Public Member Functions**

- void [sendRequest](#) (int deviceId, byte message[], int msgLength)
- void [sendRequest](#) (int deviceId, String message, int msgLength)

**Additional Inherited Members**

### 4.2.1 Detailed Description

AMASP Master class

**Author**

Andre L. Delai

### 4.2.2 Member Function Documentation

#### 4.2.2.1 [sendRequest\(\)](#) [1/2]

```
void AMASPJava.AMASPSerialMaster.sendRequest (
    int deviceId,
    byte message[],
    int msgLength )
```

Send a MRP packet to a slave computer.

## Parameters

<i>deviceId</i>	Id of the requested device in slave.
<i>message</i>	The message in bytes to be send.
<i>msgLength</i>	The message length.

4.2.2.2 `sendRequest()` [2/2]

```
void AMASPJava.AMASPSerialMaster.sendRequest (
    int deviceId,
    String message,
    int msgLength )
```

Send a MRP packet to a slave computer.

## Parameters

<i>deviceId</i>	Id of the requested device in slave.
<i>message</i>	The string message to be send.
<i>msgLength</i>	The message length.

The documentation for this class was generated from the following file:

- `C:/Users/aldelai/Documents/Repositorio/amaspjavallib/AMASPJava/src/AMASPJava/AMASPSerialMaster.`↩  
java

## 4.3 AMASPJava.AMASPSerialSlave Class Reference

Inheritance diagram for AMASPJava.AMASPSerialSlave:

## Public Member Functions

- void `sendResponse` (int deviceId, byte[] message, int msgLength)
- void `sendResponse` (int deviceId, String message, int msgLength)
- void `sendInterruption` (int deviceId, int InterrupCode)

## Additional Inherited Members

### 4.3.1 Detailed Description

AMASP Slave class

Author

delai

### 4.3.2 Member Function Documentation

#### 4.3.2.1 sendInterruption()

```
void AMASPJava.AMASPSerialSlave.sendInterruption (
    int deviceId,
    int InterrupCode )
```

Send a SIP (Slave Interrupt Packet).

Parameters

<i>deviceId</i>	Id of the slave device who generated the interruption.
<i>InterrupCode</i>	The code of the interruption (0 to 255).

#### 4.3.2.2 sendResponse() [1/2]

```
void AMASPJava.AMASPSerialSlave.sendResponse (
    int deviceId,
    byte [] message,
    int msgLength )
```

Send a SRP (Slave Response Packet) to a master computer.

Parameters

<i>deviceId</i>	Id of the slave device who answered.
<i>message</i>	The response message (in bytes) to be send.
<i>msgLength</i>	The message length.

#### 4.3.2.3 sendResponse() [2/2]

```
void AMASPJava.AMASPSerialSlave.sendResponse (
    int deviceID,
    String message,
    int msgLength )
```

Send a SRP (Slave Response Packet) to a master computer.

##### Parameters

<i>deviceID</i>	Id of the slave device who answered.
<i>message</i>	The response message (string format) to be send.
<i>msgLength</i>	The message length.

The documentation for this class was generated from the following file:

- C:/Users/aldelai/Documents/Repositorio/amaspjavallib/AMASPJava/src/AMASPJava/AMASPSerialSlave.↵  
java

## 4.4 AMASPJava.AMASPSerial.ErrorCheckType Enum Reference

### Public Member Functions

- **ErrorCheckType** (int echeckValue)
- int **getValue** ()

### Static Public Member Functions

- static **ErrorCheckType fromValue** (int value)

### Public Attributes

- **None** =(0)
- **XOR8** =(1)
- **checksum16** =(2)
- **LRC16** =(3)
- **fletcher16** =(4)
- **CRC16** =(5)

#### 4.4.1 Detailed Description

Enumeration to the error checking algorithms available in AMASP. None(0), XOR8(1), checksum16(2), LRC16(3), fletcher16(4), CRC16(5).

The documentation for this enum was generated from the following file:

- C:/Users/aldelai/Documents/Repositorio/amaspjavallib/AMASPJava/src/AMASPJava/AMASPSerial.java

## 4.5 AMASPJava.AMASPSerial.PacketData Class Reference

### Public Member Functions

- [PacketType](#) `getType ()`
- `int` `getDeviceId ()`
- `byte []` `getMessage ()`
- [ErrorCheckType](#) `getErrorCheckType ()`
- `int` `getCodeLength ()`

### 4.5.1 Detailed Description

Store the data and metadata of the packet.

### 4.5.2 Member Function Documentation

#### 4.5.2.1 `getCodeLength()`

```
int AMASPJava.AMASPSerial.PacketData.getCodeLength ( )
```

##### Returns

the codeLength

#### 4.5.2.2 `getDeviceId()`

```
int AMASPJava.AMASPSerial.PacketData.getDeviceId ( )
```

##### Returns

the deviceId

#### 4.5.2.3 `getErrorCheckType()`

```
ErrorCheckType AMASPJava.AMASPSerial.PacketData.getErrorCheckType ( )
```

##### Returns

the errorCheckType

#### 4.5.2.4 getMessage()

```
byte [] AMASPJava.AMASPSerial.PacketData.getMessage ( )
```

##### Returns

the message

#### 4.5.2.5 getType()

```
PacketType AMASPJava.AMASPSerial.PacketData.getType ( )
```

##### Returns

the type

The documentation for this class was generated from the following file:

- C:/Users/aldelai/Documents/Repositorio/amaspjavallib/AMASPJava/src/AMASPJava/AMASPSerial.java

## 4.6 AMASPJava.AMASPSerial.PacketType Enum Reference

### Public Member Functions

- **PacketType** (int typeValue)
- int **getValue** ()

### Public Attributes

- **MRP** =(0)
- **SRP** =(1)
- **SIP** =(2)
- **CEP** =(3)
- **Timeout** =(4)

#### 4.6.1 Detailed Description

Enumeration to the packet types available in AMASP and the Timeout condition. MRP(0), SRP(1), SIP(2), CEP(3), Timeout(4).

The documentation for this enum was generated from the following file:

- C:/Users/aldelai/Documents/Repositorio/amaspjavallib/AMASPJava/src/AMASPJava/AMASPSerial.java
